

THE ART OF CAUSAL CONJECTURE

Glenn Shafer

Table of Contents

Chapter 1. Introduction	1
1.1. Probability Trees	3
1.2. Many Observers, Many Stances, Many Natures	8
1.3. Causal Relations as Relations in Nature’s Tree	9
1.4. Evidence.....	13
1.5. Measuring the Average Effect of a Cause.....	17
1.6. Causal Diagrams	20
1.7. Humean Events	23
1.8. Three Levels of Causal Language.....	27
1.9. An Outline of the Book.....	27
Chapter 2. Event Trees.....	31
2.1. Situations and Events	32
2.2. The Ordering of Situations and Moivrean Events	35
2.3. Cuts	39
2.4. Humean Events	43
2.5. Moivrean Variables.....	49
2.6. Humean Variables.....	53
2.7. Event Trees for Stochastic Processes.....	54
2.8. Timing in Event Trees	56
2.9. Intersecting Event Trees.....	60
2.10. Notes on the Literature.....	61
Chapter 3. Probability Trees	63
3.1. Some Types of Probability Trees	64

3.2. Axioms for the Probabilities of Moivrean Events	68
3.3. Zero Probabilities	70
3.4. A Sample-Space Analysis of the Event-Tree Axioms	72
3.5. Probabilities and Expected Values for Variables.....	74
3.6. Martingales	79
3.7. The Expectation of a Variable in a Cut.....	83
3.8. Conditional Expected Value and Conditional Expectation	87
Chapter 4. The Meaning of Probability.....	91
4.1. The Interpretation of Expected Value	92
4.2. The Interpretation of Expectation	95
4.3. The Long Run	98
4.4. Changes in Belief.....	101
4.5. The Empirical Validation of Probability.....	106
4.6. The Diversity of Uses of Probability	108
4.7. Notes on the Literature.....	110
Chapter 5. Independent Events	113
5.1. Independence	114
5.2. Weak Independence	118
5.3. The Principle of the Common Cause.....	121
5.4. Conditional Independence.....	128
5.5. Notes on the Literature.....	133
Chapter 6. Events Tracking Events.....	135
6.1. Tracking	137
6.2. Tracking and Conditional Independence	142
6.3. Stochastic Subsequence	143
6.4. Singular Diagrams for Stochastic Subsequence.....	147
6.5. Conjunctive and Interactive Forks	149
Chapter 7. Events as Signs of Events.....	153

7.1. Sign	154
7.2. Weak Sign.....	159
7.3. The Ethics of Causal Talk.....	160
7.4. Screening Off	162
Chapter 8. Independent Variables	167
8.1. Unconditional Independence.....	170
8.2. Conditional Independence.....	175
8.3. Independence for Partitions	177
8.4. Independence for Families of Variables	182
8.5. Individual Properties of the Independence Relations.....	186
Chapter 9. Variables Tracking Variables	189
9.1. Tracking and Conditional Independence: A Summary	190
9.2. Strong Tracking.....	192
9.3. Strong Tracking and Conditional Independence.....	198
9.4. Stochastic Subsequence	201
9.5. Functional Dependence.....	203
9.6. Tracking in Mean	204
9.7. Linear Tracking.....	207
9.8. Tracking by Partitions	210
9.9. Tracking by Families of Variables	212
Chapter 10. Variables as Signs of Variables.....	215
10.1. Sign	219
10.2. Linear Sign.....	222
10.3. Scored Sign	225
10.4. Families of Variables	227
Chapter 11. An Abstract Theory of Event Trees.....	229
11.1. Event Trees as Sets of Sets	230
11.2. Event Trees as Partially Ordered Sets	232

11.3. Regular Event Trees.....	240
11.4. The Resolution of Moivrean Variables.....	244
11.5. Humean Events and Variables.....	246
Chapter 12. Martingale Trees.....	247
12.1. Examples of Decision Trees.....	249
12.2. The Meaning of Probability in a Decision Tree.....	253
12.3. Martingales.....	257
12.4. The Structure of Martingale Trees.....	261
12.5. Probability and Causality.....	265
12.6. Lower and Upper Probability.....	269
12.7. The Law of Large Numbers.....	272
12.8. Notes on the Literature.....	274
Chapter 13. Refining.....	275
13.1. Examples of Refinement.....	277
13.2. A Constructive Definition of Finite Refinement.....	281
13.3. Axioms for Refinement.....	282
13.4. Lifting Moivrean Events and Variables.....	288
13.5. Refining Martingale Trees.....	288
13.6. Grounding.....	294
Chapter 14. Principles of Causal Conjecture.....	299
14.1. The Diversity of Causal Explanation.....	302
14.2. The Mean Effect of the Happening of a Moivrean Event.....	305
14.3. The Effect of a Humean Variable.....	311
14.4. Attribution and Generality.....	316
14.5. The Statistical Measurement of the Effect of a Cause.....	319
14.6. Measurement by Experiment.....	320
14.7. Using Our Knowledge of How Things Work.....	322

14.8. Sampling Error.....	329
14.9. The Sampling Frame.....	329
14.10. Notes on the Literature.....	330
Chapter 15. Causal Models.....	331
15.1. The Causal Interpretation of Statistical Prediction.....	333
15.2. Generalizing to a Family of Exogenous Variables.....	337
15.3. Some Joint Causal Diagrams.....	339
15.4. Causal Path Diagrams.....	342
15.5. Causal Relevance Diagrams.....	346
15.6. The Meaning of Latent Variables.....	352
15.7. Notes on the Literature.....	357
Chapter 16. Representing Probability Trees.....	359
16.1. Three Graphical Representations.....	361
16.2. Skeletal Simplifications.....	368
16.3. Martingale Trees in Type Theory.....	371
Appendix A. Huygens's Probability Trees.....	379
Huygens's Manuscript in Translation.....	380
Appendix B. Some Elements of Graph Theory.....	385
B1. Undirected Graphs.....	385
B2. Directed Graphs.....	386
Appendix C. Some Elements of Order Theory.....	393
C1. Partial and Quasi Orderings.....	393
C2. Singular and Joint Diagrams for Binary Relations.....	394
C3. Lattices.....	395
C4. The Lattice of Partitions of a Set.....	396
Appendix D. The Sample-Space Framework for Probability.....	399
D1. Probability Measures.....	399
D2. Variables.....	400

D3. Families of Variables	401
D4. Expected Value	402
D5. The Law of Large Numbers	405
D6. Conditional Probability	406
D7. Conditional Expected Value	407
Appendix E. Prediction in Probability Spaces	409
E1. Conditional Distribution.....	411
E2. Regression on a Single Variable.....	412
E3. Regression on a Partition or a Family of Variables	415
E4. Linear Regression on a Single Variable	418
E5. Linear Regression on a Family of Variables	422
Appendix F. Sample-Space Concepts of Independence	425
F1. Overview.....	426
F2. Independence Proper.....	432
F3. Unpredictability in Mean	434
F4. Simple Uncorrelatedness	437
F5. Mixed Uncorrelatedness	438
F6. Partial Uncorrelatedness	440
F7. Independence for Partitions	442
F8. Independence for Families of Variables	445
F9. The Basic Role of Uncorrelatedness.....	448
F10. Dawid's Axioms	449
Appendix G. Prediction Diagrams	453
G1. Path Diagrams	454
G2. Generalized Path Diagrams.....	462
G3. Relevance Diagrams.....	466
G4. Bubbled Relevance Diagrams	475
Appendix H. Abstract Stochastic Processes	479

H1. Probability Conditionals and Probability Distributions	477
H2. Abstract Stochastic Processes	479
H3. Embedding Variables and Processes in a Sample Space	480
References	491
